How To

Use the Live Tab

On the Glowstone Lighting Plus App

#1

When you first launch the Glowstone Lighting Plus app you will be shown this wizard. You can choose to use it, or skip past it to the live tab. In this tutorial we are going to click "close" to skip it.
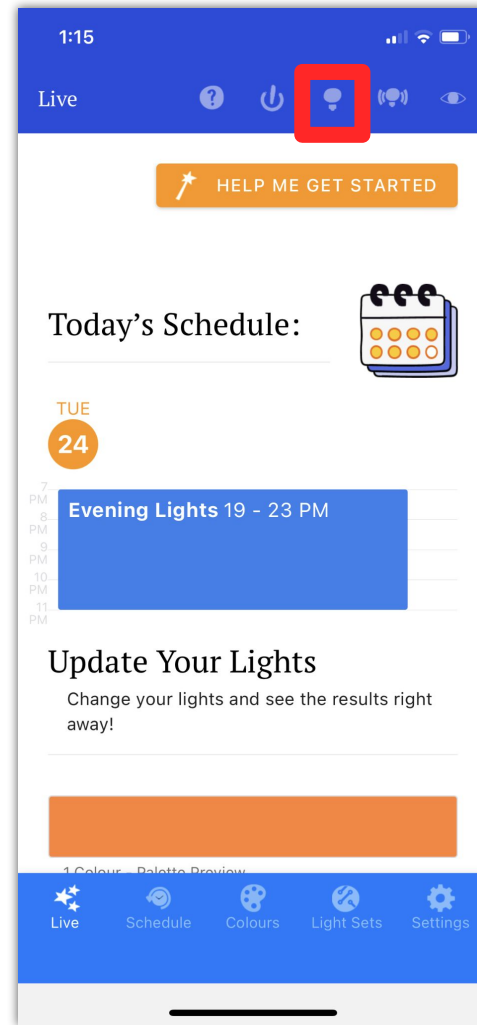

#2

The first thing you can do from the live tab is turn your lights on or off. There are 2 ways to turn your lights on or off. The first is the "master" on/off switch. This will turn your lights off and will override the timer.
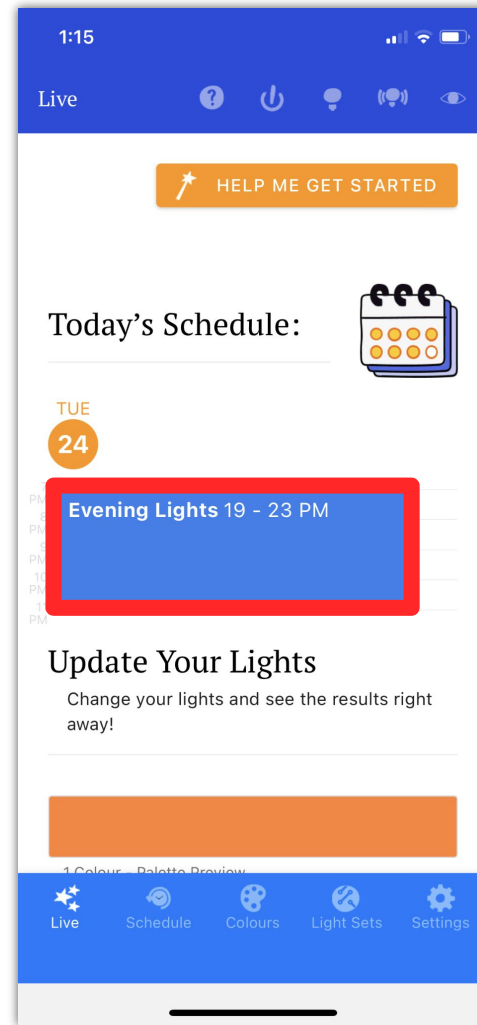

#3

The second way to turn on or off your lights is to use this button. The difference with this button is if you turn your lights off with it, your timer will still activate and your lights will still come on at the scheduled time.
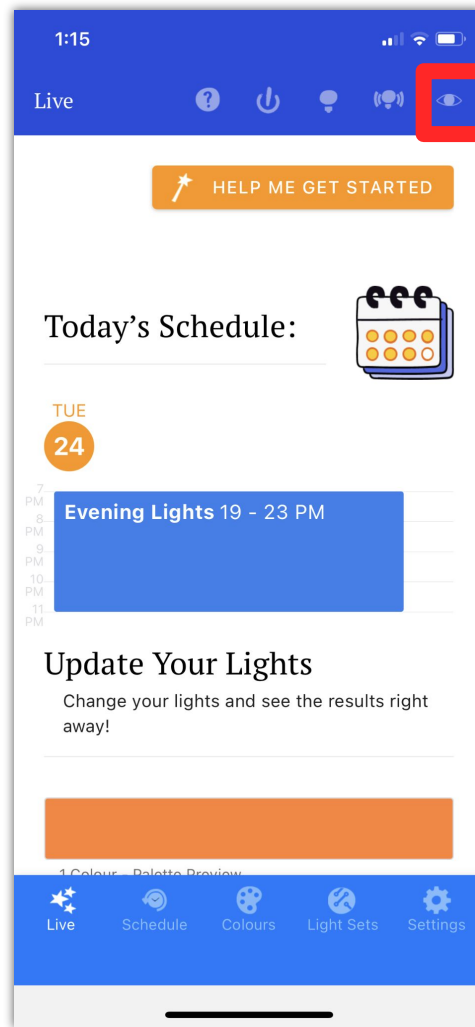

#4

Another thing you can do is view any events you have scheduled for the day. If you do have an event scheduled you can choose to edit it by simply clicking on it.
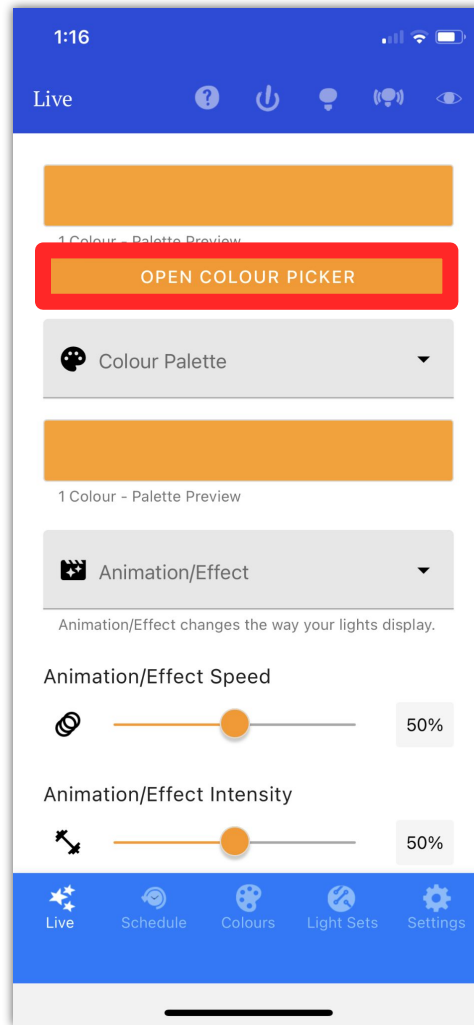

#5

From here you are also able to see a preview of what your lights are doing by clicking on the eye at the top.
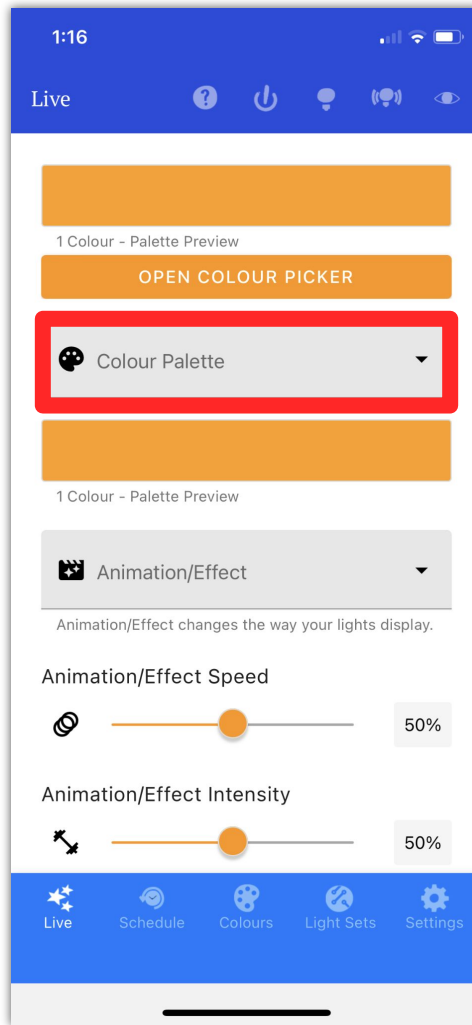

#6

If you scroll down you will see a button that says "open colour picker". Clicking on this will bring up a colour wheel, tap anywhere on this wheel to change your lights to that colour.

LIGHTING

#7

If you want to use multiple colours you will have to select a color palette. You can do this here.
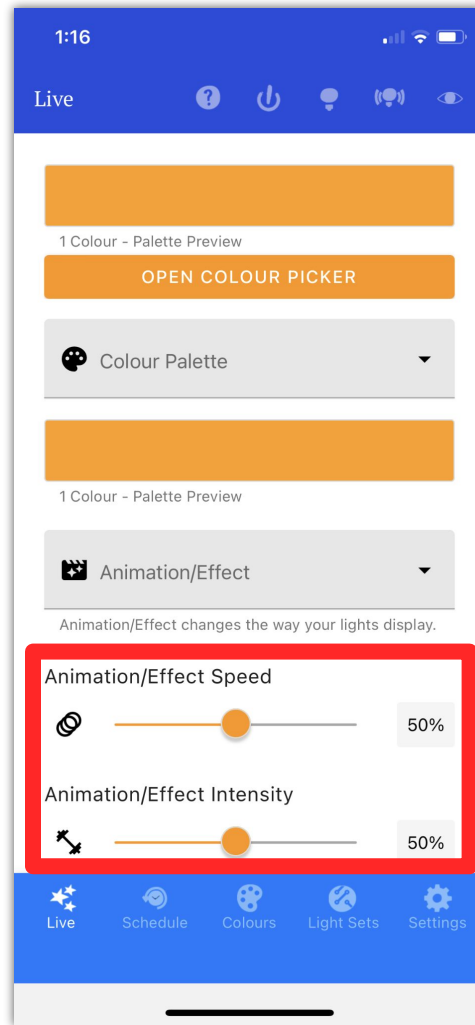

#8

When using colour palettes you will also need to choose an effect. Some of the more popular effects are- Solid pattern tri, Flow, Tri chase, and Twinklefox.
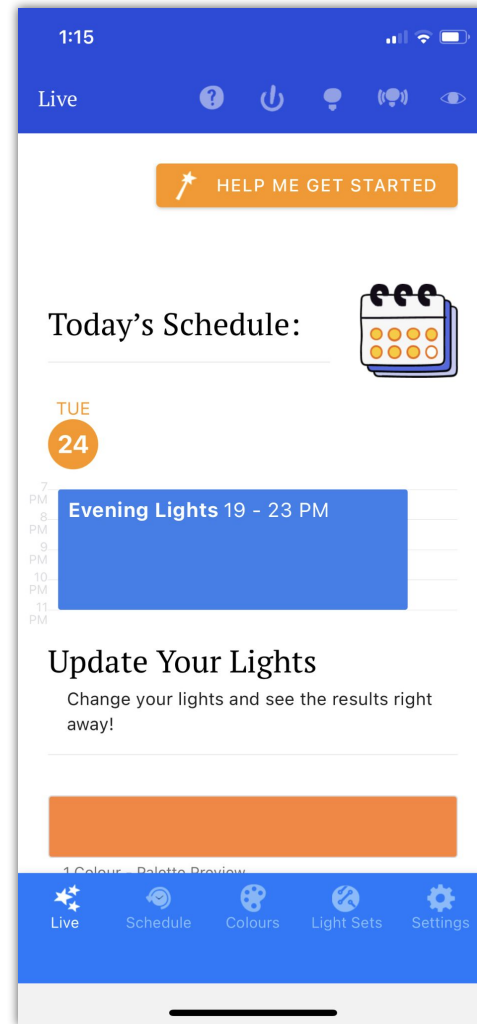

#9

Using the effect intensity and speed sliders you are able to change how the effect behaves. It is important to remember though that not all of the effects move. Such effects will only be influenced by intensity.

#10

We suggest that you play around with the live tab. Doing this is not only fun because you get to see your lights changing but will also help you to become more familiar with the app.

Thank you!

We hope you Love Coming Home
to your GlowStone Lighting.
