

# Lights Won't Connect- New WiFi Network

GlowStone Lighting Plus App

If you've gotten a new WiFi network since having your lights installed and the app is displaying the message "You Aren't Connected," then follow these steps to get reconnected to your lights.

# #1

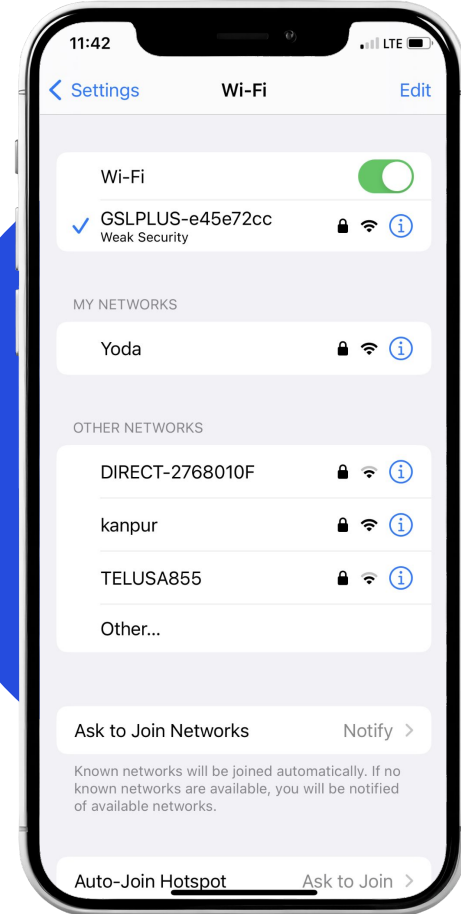

Go to the Wi-Fi settings on your phone and locate the "GSLPLUS..." network that looks similar to this and click on it.

*If you can't see a network like this, check that there is power to your lights.*

## #2

Click on the network and enter  
this password: **gslplus86CD4T**

# #3

After a few second, your phone will bring up this page. You are now in the backend of the app.

# #4

Click "Config" in the top right corner.

# #5

Now click "WiFi Setup".

## Note

Some home WiFi signals are split into 5GHz and 2.4GHz networks.

The GlowStone lighting Plus Controller has to be connected to the 2.4 GHz option.

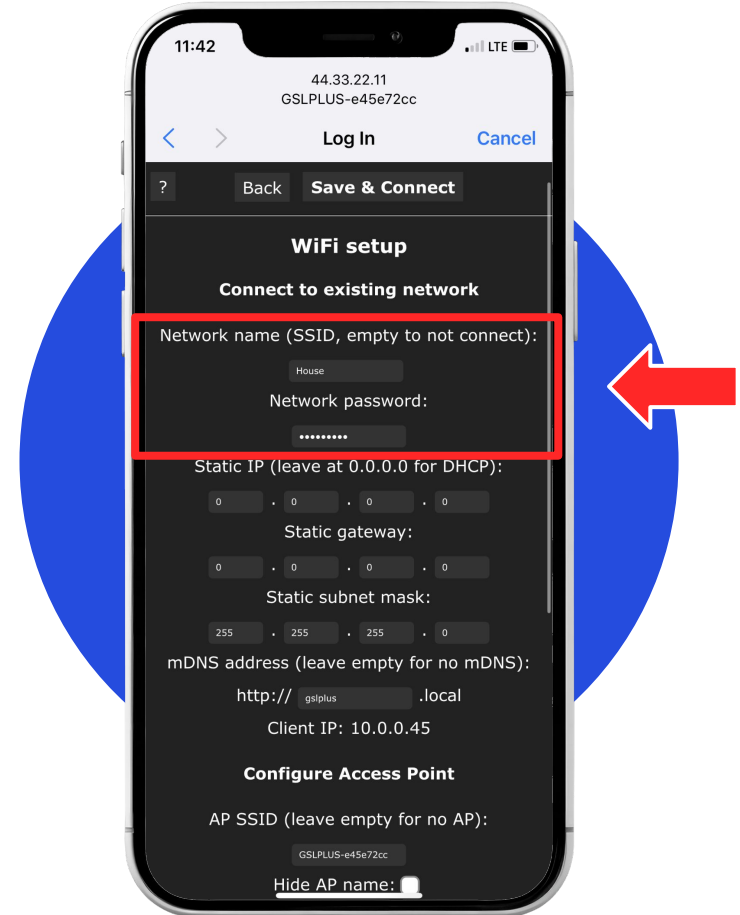

# #6

Enter your new Network Name (SSID) and Network Password.

*You MUST enter the Network Name and Network Password exactly as they are listed on your phone, or your controller will not connect. Capitals letters, punctuation and spaces matter.*

# #7

Once you have entered the Network Name and password click "Save & Connect" to save your changes and connect your controller to the new network.

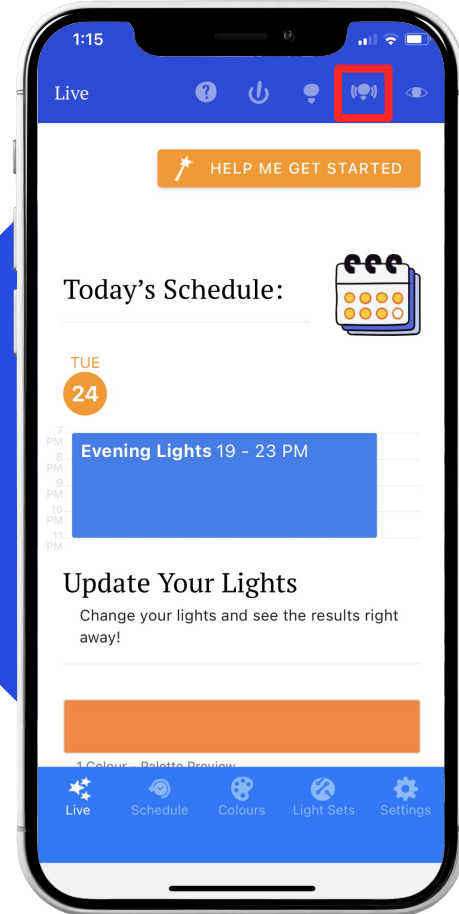

# #8

Now:

- Go back to your phone settings and connect to your home wifi.
- Launch the App.

You should now be connected to your lights.

# Thank you!

We hope you Love Coming Home  
to your GlowStone Lighting.
