

# Addressing Flickering

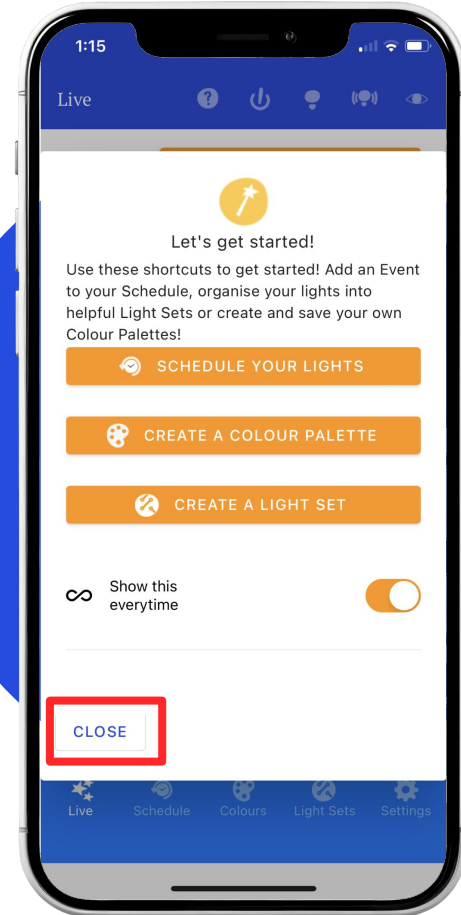

GlowStone Lighting Plus App

If you happen to notice a rare light flicker, follow these simple steps to check a few things and eliminate it.

# #1

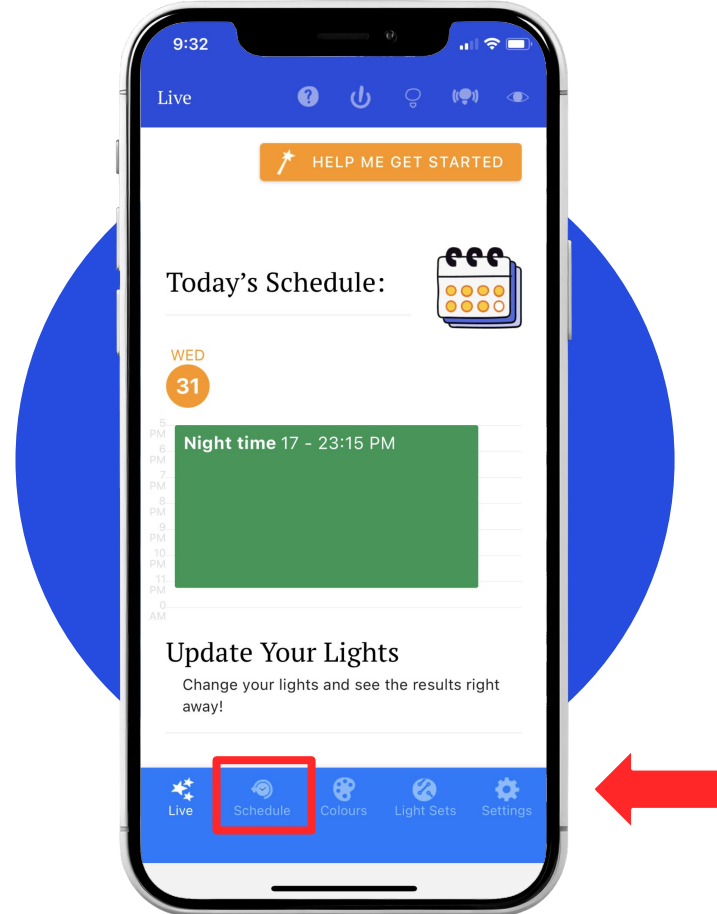

Launch the Glowstone Lighting Plus app and close the “Let’s get started!” page.

## #2

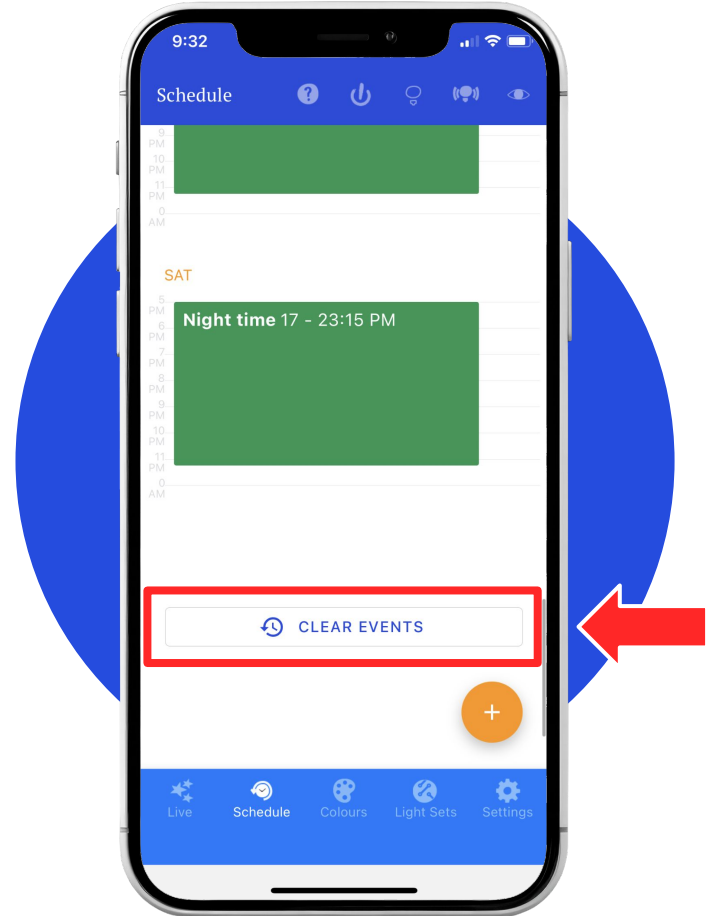

### Check the Schedule

The first place to check is the Schedule tab—ensure there are no conflicting schedules. To do that go to the Schedule tab.

# #3

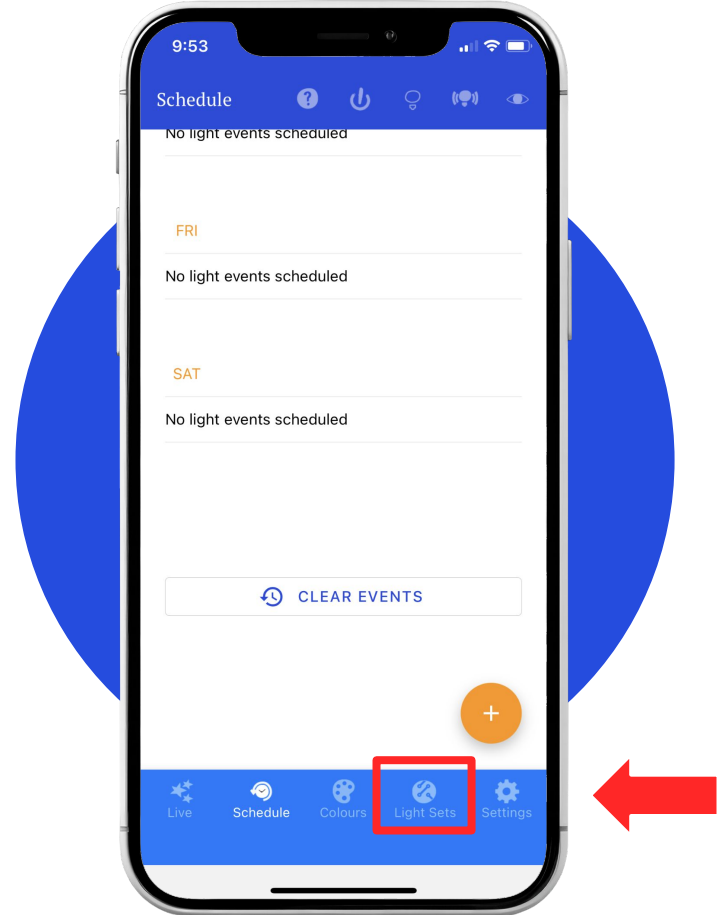

Scroll down to the bottom and click  
“Clear Events” and “Confirm”.

# #4

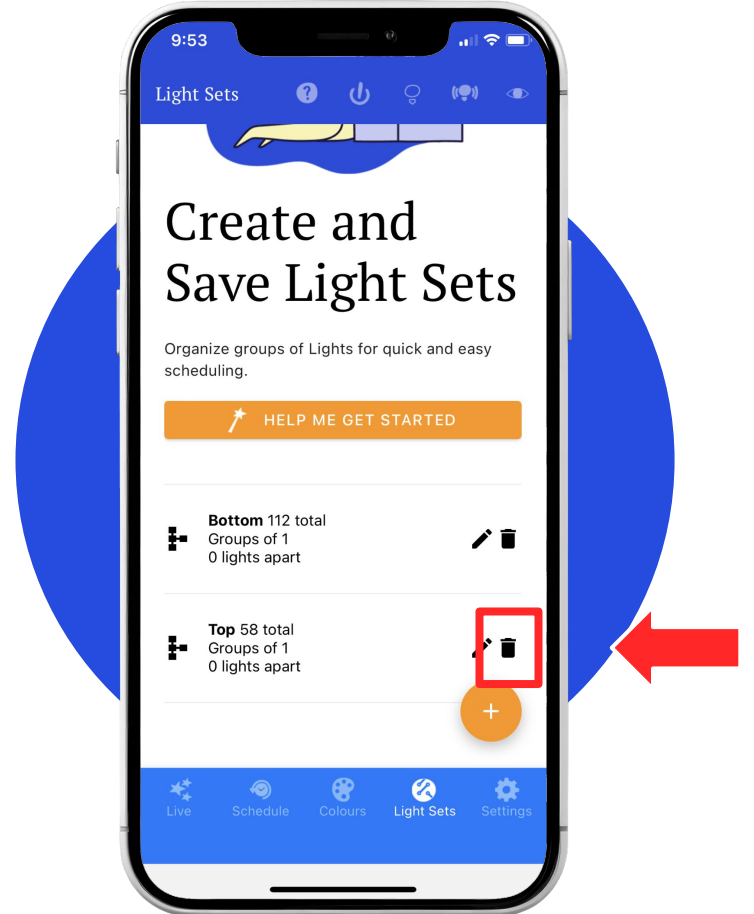

## Check the Lights Sets

Another thing to check is the Light Sets tab—make sure there are no overlapping light sets. To do that go to the Light Sets tab.

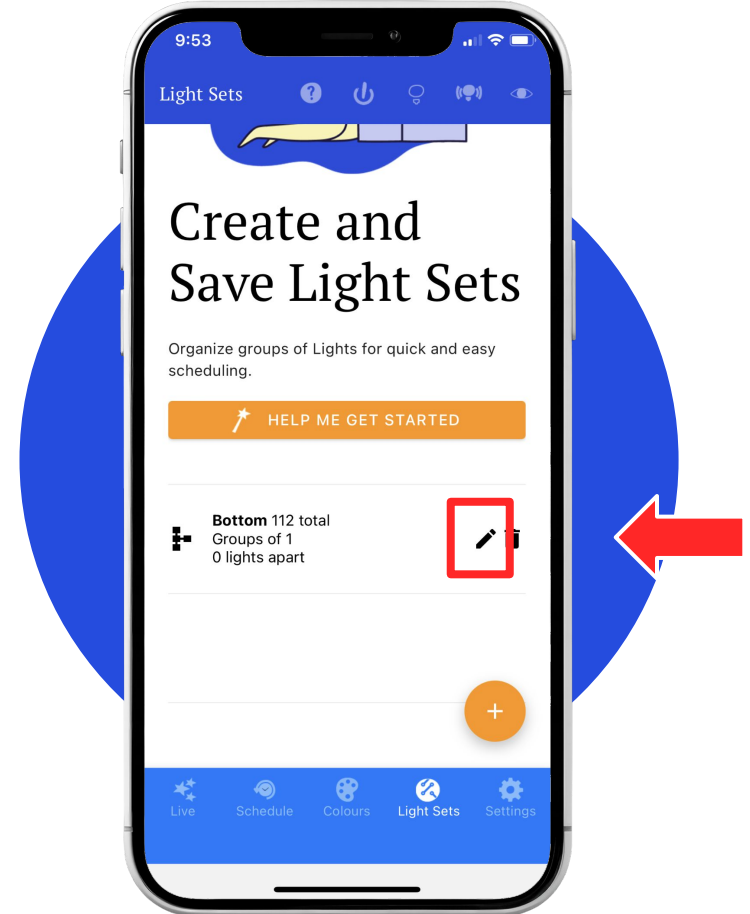

## #5

Make sure there is only one light set created. If you have multiple remove all but one by clicking on the trash can and then on "Delete".

# #6

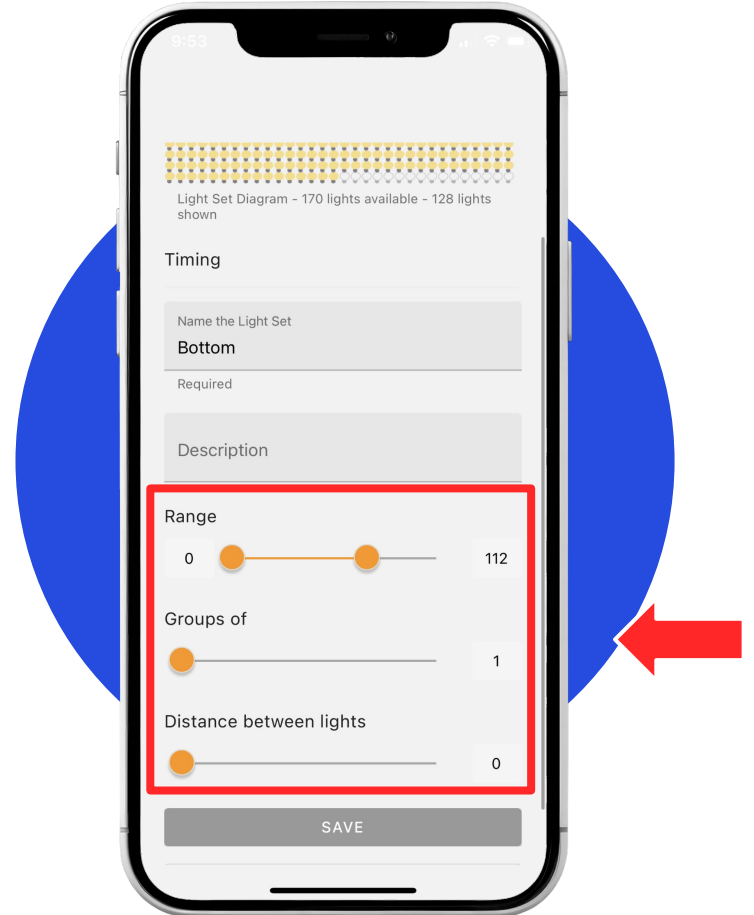

Now click on the pencil next to the last light set to access its settings.

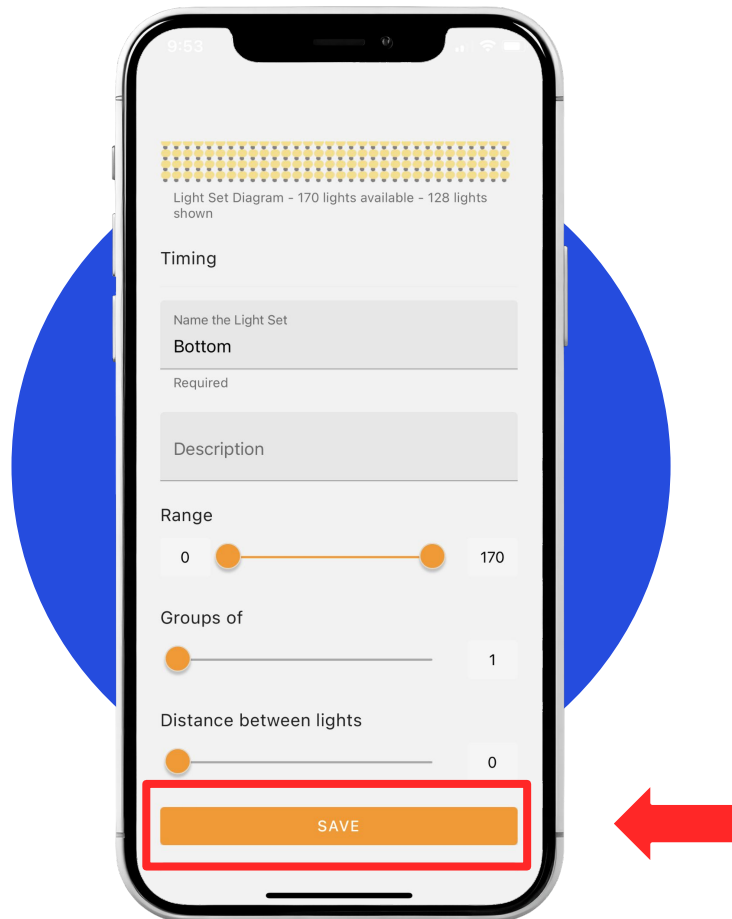

# #7

Adjust the "Range" to be 0-max. For this example the "max" is 170 lights. Also change "Groups of" to 1 and "Distance between lights" to 0.

# #8

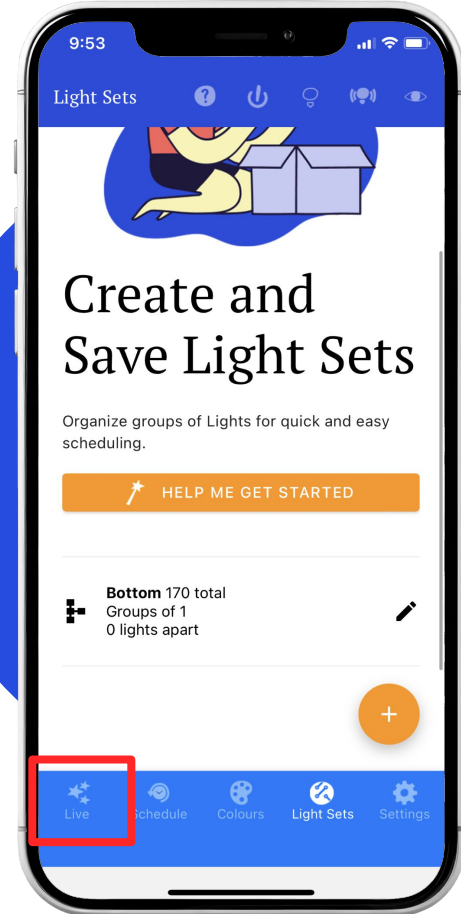

Once you've adjusted to these values click "Save".

## #9

Now you can return to the 'Live' tab, and your lights should work smoothly.

*If for some reason your lights continue to flicker, contact your Dealer for technical assistance or reach out to our main office at (403) 453-2224 or via email at [info@glowstonelighting.com](mailto:info@glowstonelighting.com).*

# Thank you!

We hope you Love Coming Home  
to your GlowStone Lighting.
